

Background and subject

- ▶ Previously was an R&D engineer for a few years (quantum computing).
-

- ▶ Started in October a PhD with Yann Ponty (LIX) and Laurent Bulteau (LIGM).
- ▶ Subject: *Parameterized algorithms for the extraction of a hierarchy of structural models in RNAs.*

Background and subject

- ▶ Previously was an R&D engineer for a few years (quantum computing).
-

- ▶ Started in October a PhD with Yann Ponty (LIX) and Laurent Bulteau (LIGM).
- ▶ Subject: *Parameterized algorithms for the extraction of a hierarchy of structural models in RNAs.*
 - **Parameterized algorithms** → e.g $O(f(k) \cdot n^c)$ for a hard problem. k = parameter.
 - **hierarchy** → hierarchy of increasing **treewidth** (measures how tree-like a graph is)
 - **RNAs** → help for **structured-RNA-sequence annotation in genomes**, or **RNA design**
